

Are Sunrider Products Expensive?

Depending on whom we talk to, we will find different answers. The more understanding and knowledge people have, the less expensive the products will be to them. Then again, it depends how people use the products, how much they use and how many different products they consume.

I have friends that like Calli beverage very strong. They put two bags in one cup. You might think this is very expensive (\$2 a cup). Well, it is still cheaper than a cup of coffee at Starbucks and much healthier for the body.

Then there are Sunriders who will make 4 to 8 liters (1 - 2 gallons) of Calli beverage out of just one bag (\$0.02 a cup). This way 50 people can enjoy a cup of Calli from just one bag.

Some people like Sunrider products so much that they use every one of the more than 400 products that Sunrider produces. And then there are Sunriders who are so eager to see positive results fast, they consume large quantities of products each day. This can be more costly.

Sunrider products are very **inexpensive** when we understand their **value**, considering they give us **results** like no other products on the market. Sunrider products are 7 to 40 times **concentrated**. This means that the company will take up to 40 lbs and concentrate it down to 1 lb or they will take 40 kg and concentrate it down to 1 kg. They **extract** the bulk and water

out of herbs and plants and end up with just **nutrients** still in a **life force** form that are so **essential for our body**. The regular food today is so depleted of nutrients and there is no wonder that people get tired, have low energy or end up sick.

We still eat regular food for bulk and some nutrition but we need to supplement. Vitamins and minerals are not the answer. They are just chemical isolates, without life force and are difficult for the body to absorb or even eliminate. The best choices are Sunrider foods not for just their powerful concentration but also for the **variety of different herbs**, plants, fruits and vegetables that are not available in our grocery stores but are so essential for the well being of our body.

If we eat just our basic NBC program which is: **Nu-Plus**, **Calli** and **Quinary**, we will enjoy over 100 different highly concentrated foods. In the grocery stores you will find around 75 fruits and vegetables and of course we cannot eat them all each day. This is the Sunrider difference. Because the products are so concentrated we will not overeat and at the same time will nourish our body with 100's of foods each day to keep the body **healthy, strong** and **in balance**.

Sunrider products are **formulated** and **enhanced** making sure the herbs work the best for us and that there are **no side effects**. All the herbs are food grade herbs and can be eaten in large amounts.

These foods are **inexpensive** when you consider the **high concentration, formulation** and **enhancement** which create great **value** and **incredible positive results**.

Sunrider products are foods not just supplements and can **replace many groceries** and **drinks**. This way we can **save** about **50%** on **food** and up to **100%** on **drinks**.

Even better; when you tell others about these products, you will be **financially rewarded** and you can have **Sunrider products for free**. When we like the products, we should share them with others.

There are so many people looking for answers and solutions to their situations and **Sunrider is the right choice**.
